

Consent form for participation in the research project Evaluation of VIVE: An LLM-based approach to identifying and extracting context-specific personal values from text Please read the statements below and tick the final box to confirm you have read and understood the statements and upon doing so agree to participate in the project. I confirm that I am 18 years of age or over. I confirm that the research project “Evaluation of VIVE: An LLM-based approach to identifying and extracting context-specific personal values from text” has been explained to me. I have had the opportunity to ask questions about the project and have had these answered satisfactorily. I had enough time to consider whether to participate. I consent to the material I contribute being used to generate insights for the research project “VIVE: An LLM-based approach to identifying and extracting context-specific personal values from text”. I understand that my participation in this research is voluntary and that I may withdraw from the study at any time without providing a reason, and that if I withdraw any personal data already collected from me will be erased. I consent to allow the appropriately anonymized data to be used in future publications and other scholarly means of disseminating the findings from the research project. I understand that the data acquired will be securely stored by researchers, but that appropriately anonymized data may in future be made available to others for research purposes. I understand that the University may publish appropriately anonymized data in appropriate data repositories for verification purposes and to make it accessible to researchers and other research users. I confirm that I have read and understood the above statements, and agree to participate in the study (yes or no). 6 ⓘ

I think when you focus on what the community needs instead what you believe they need, it is the better way and can help creating better programs

The only reason why I did not "strongly agree" with the first sentence is because the tool does not really "automatically" extract information, but requires quite some manual labeling.

It is not always possible to create programs of every need, but it can definitely help

The report looks really good, except for the pie chart :) never use pie charts! Just kidding, the only missing piece is some interactivity to enable the user to "drill down" specific issues.

For me the report is clear, I would add some extra information, for example the telegram groups it came from.

The personal values that VIVE extracts for the example messages included in the report are accurate. The extracted personal values are actually underlying values of the message. 3 ⓘ

I like the report, I like that is not super long and you can read the messages if you need "proof".

As I said earlier, less human effort (or as little as possible) and more interactive results. Great work nevertheless!
